

Remote Monitoring Applications

And the products to alert you if there are problems!

There are hundreds of applications where it is important to monitor if something goes wrong while you are away.

Control Products offers a variety of solutions to monitor everything from a sophisticated computer server room to the temperature in a vineyard. Our TempAlarms™ and FreezeAlarms™ have been protecting commercial and agricultural assets for over 20 years. Combined with our extensive sensor technology for humidity, water and even pressure, we can provide a remote monitoring solution that provides peace of mind.

The following page details some specific applications and some of the products that can be used to monitor those applications.

In addition to our alarm products, Control Products offers a full line of temperature, and humidity controllers, indicators, alarms and sensors. We also have security systems, cameras and motion sensors.

Give us a call to discuss your specific remote monitoring application.

Remote Monitoring Solutions

CONTROL PRODUCTS

The monitoring of our food supply, computers and even vaccine, blood and tissue storage areas are crucial to ensuring safe food, secure on-line computing and fresh medical supplies. Control Products has developed a number of affordable solutions for easy monitoring of temperature, humidity, power supply, the presence of water or if intruders have broken into a space. Here are few applications where we can help.

- **COMPUTER ROOMS/SERVER FACILITIES**

Computer/Server rooms require a consistently lower temperature and humidity level than other parts of an office or industrial environment. Air conditioner condensing trays can often overflow, posing a dangerous risk of shock and equipment damage should water get near the computer equipment. Control Products can monitor the temperature, humidity level, presence of water and power failures. Our TempAlarms and FreezeAlarms are currently protecting computers in over a thousand U.S. embassies and consulate offices throughout the world.

- **CLEAN ROOMS AND LABORATORIES**

These environments contain sensitive equipment that requires consistent temperature and humidity control. We offer excellent control devices as well as the remote monitoring products to alert you if the temperature or humidity gets out of range.

- **FOOD SERVICE EQUIPMENT - WALK-IN/REACH-IN COOLERS AND FREEZERS**

From Baskin Robbins to the local convenience store, thousands of walk-in coolers, freezer chests, reach-in coolers and floral refrigerators are now protected with the FreezeAlarm. The FreezeAlarm notifies store personnel or technicians of rising temperatures or power failures so they can take corrective action to save valuable food, flowers or other sensitive inventories.

- **ANIMAL CONTAINMENT BUILDINGS**

In animal containment buildings for hogs, poultry or cattle, it is extremely important to ensure proper ventilation, temperature and humidity settings. Our temperature and humidity controls, alarms and dialers can be combined to provide the right level of protection for your specific agricultural application.

- **GREENHOUSE, NURSURY, VINEYARD AND FRUIT GROWERS**

Plants and crops can easily be damaged by temperature extremes, excessive watering or failure of a watering system. Control Products offers a variety of products to monitor locations in remote fields or buildings using wireless or longer sensor options. We have dialers that can accept multiple inputs and can alert multiple parties to get the problem corrected quickly. Our Deluxe FreezeAlarm even allows for the remote activation by telephone of an auxiliary fan, watering system, A/C system or heater so the problem can be corrected immediately - from any phone.

- **MEDICINE, VACCINE and BLOOD MONITORING**

Vaccines, tissues, medicine and blood supplies must remain at a stable temperature and humidity level to retain the viability when needed. Controlling, logging and monitoring for temperature and humidity extremes can be accomplished through a number of products offered by Control Products.

- **REMOTE SWITCHING OF DEVICES BY TELEPHONE**

The Deluxe FreezeAlarm's switchable relay contact can be used to turn on or off a remote device or piece of equipment. Applications include turning on or off a pump, air conditioning or heating units.
